This lesson examines the movement of Neptune through the signs of the zodiac and its correlation with long-term cycles in stock markets, with special emphasis upon the U.S. and British stock markets

In this lesson, we will cover the following topics:

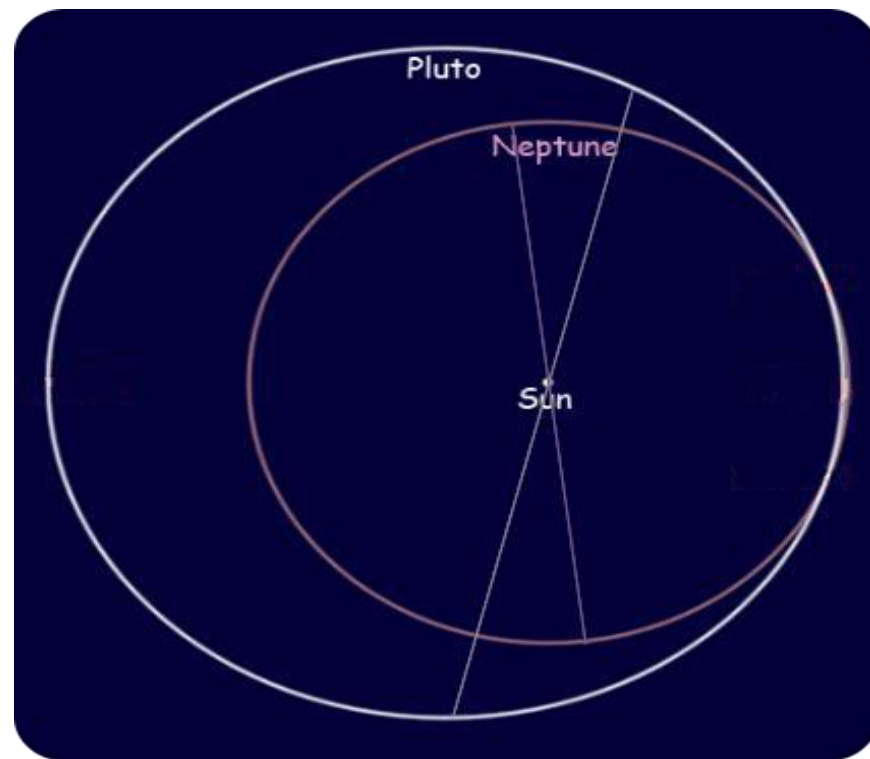

Applying the steps from Lesson 5 and 6 to find a correlation between Neptune's sign position and long-term stock market cycles

The long-term stock market chart divided by Neptune in signs

Correlations of Neptune by sign and degrees to long-term stock market cycles

THE NEPTUNE EFFECT

- Neptune's orbital cycle around the Sun lasts 164 years
- Unlike Pluto (which has an orbit unlike all other planets), Neptune's orbit through the zodiac is fairly constant
- It spends 14-15 years in each sign

➔ Please refer to Lesson 4 for the time bands of Neptune in each sign

The following tables show Neptune's position at the long-term 72- or 90-year cycle troughs and crests, as well as their secondary lows

INITIAL LONG-TERM LOWS AND THEIR CRESTS

START (LOW)

1) July 1, 1762

73 years

END (CREST)

May 15, 1835

Neptune 22° Leo

Neptune 3° Aquarius

2) February 15, 1842

87 years

September 3, 1929

Neptune 17° Aquarius

Neptune 1° Virgo

INITIAL LONG-TERM LOWS AND THEIR CRESTS

START (LOW)

3) July 8, 1932

Neptune 5° Virgo

END (CREST)

October 11, 2007

Neptune 19° Aquarius

75 years

4) March 9, 2009

Neptune 24° Aquarius

Crest due 2082-2096 (73-87 years after low)

Neptune Cancer- Virgo

SECONDARY LOWS TO FIRST LONG-TERM CYCLE CRESTS

START (LOW)

1 A.) July 1, 1784

Neptune 9° Libra

51 years

END (CREST)

May 15, 1835

Neptune 3° Aquarius

2 A.) October 15, 1857

Neptune 22° Pisces

72 years

September 3, 1929

Neptune 1° Virgo

SECONDARY LOWS TO FIRST LONG-TERM CYCLE CRESTS

START (LOW)

3 A.) March 31, 1938

69 years

END (CREST)

October 11, 2007

Neptune 19° Virgo

Neptune 19° Aquarius

3 B.) April 29, 1942

65 years

October 11, 2007

Neptune 27° Virgo

Neptune 19° Aquarius

SECONDARY LOWS TO FIRST LONG-TERM CYCLE CRESTS

START (LOW)

4.) *March 23, 2020*

Neptune 19° Pisces

END (CREST)

*Crest due 51-72 years
after secondary trough*

4A.) *Trough due 2015-2031
(6-22 years after first low
of March 2009)*

Neptune Pisces- Aries

*Crest due 51-72 years
after secondary trough*

From these tables, one can derive several possible correlations between Neptune's zodiacal position and both long-term cycle troughs and crests in U.S. stocks, and their secondary bottoms, as well as the duration of moves from those troughs to their crests

Long-Term Cycle Low Geocosmic Correlations - Neptune

The long-term cycle troughs seem to unfold nearby to a half-cycle of Neptune's orbit around the Sun

In modern-day astrology, Neptune rules the tropical sign of Pisces, and is in its fall (weakened position) in the opposite sign of Virgo

Long-Term Cycle Low Geocosmic Correlations - Neptune

A review of the four long-term cycle lows (first troughs) reveals that Neptune was in late Leo or early Virgo in 1762 and 1932, while in late Aquarius (the sign before Pisces) in 1842 and 2009

Long-Term Cycle Low Geocosmic Correlations - Neptune

These are opposite one another. In other words, *when Neptune was between 22° Leo and 5° Virgo*

or 17-24° Aquarius, long-term stock market troughs have occurred

Secondary Cycle Low Geocosmic Correlations - Neptune

The secondary lows shown in Table 2 reveal a similar correlation with Neptune

Neptune was approaching one of the equinox signs (Aries and Libra)

Neptune was within 10° of its ingress into Libra (twice) or Aries

In the 1938 secondary low, Neptune was in 19° Virgo, which is 11° from the equinox point of 0° Libra

Secondary Cycle Low Geocosmic Correlations - Neptune

However, the 1942 secondary low was even closer – only 3° prior to Libra

In the potential secondary low in March 2020, Neptune was 11° from Aires. Neptune will next ingress into Aries in 2025

10° orb segment would be in effect from 2020-2030, which represents a potential time band for the next secondary trough from which a great bull market could commence, if it follows the same pattern of the previous three confirmed instances

This is within the same time band in which a secondary trough was due to unfold according to the studies just discussed under the Pluto effect (2015-2031)

Long-Term Cycle Crest Geocosmic Correlations - Neptune

Another interesting observation is that each of the bull market's tops and bottoms (both initial and secondary bottoms) since 1857 unfolded when Neptune transited a mutable sign (Gemini, Virgo, Sagittarius, and Pisces) discussed under the Pluto effect (2015-2031)

Long-Term Cycle Crest Geocosmic Correlations - Neptune

The 1857 secondary low occurred with Neptune at 20° Pisces; the 1929 crest found Neptune at 1° Virgo; the 1932 initial low had Neptune at 5° Virgo, while the 1942 secondary trough found Neptune at 27° Virgo

Long-Term Cycle Crest Geocosmic Correlations - Neptune

Even if we use the 1973 crest as valid, Neptune was at 6° Sagittarius, and the absolute low which followed saw Neptune at 9° Sagittarius, and the secondary trough of 1982 occurred when Neptune was at 24° Sagittarius — all mutable signs

The next mutable occurrence of Neptune will be through Pisces, between 2011 and 2025

If this signature unfolds again as it has since 1857, the stock market would end its bull run, and form both an absolute trough and a secondary trough during this time band

Geocosmic Correlations of Initial Cycle Troughs to Secondary Lows

There were none

Geocosmic Correlations of Initial Cycle Troughs to Cycle Crests

The movement of Neptune from a long-term cycle trough to the long-term cycle crest shows signs of promise. In each case, Neptune moved nearly half of its orbital cycle

In actual degrees, the movement of Neptune ranged from half-cycle 161° to 194° (a would be 180° , which is very close to the mean)

Geocosmic Correlations of Initial Cycle Troughs to Cycle Crests

From the low of 1762 to the crest of 1835, Neptune advanced from 22° Leo to 3° Aquarius, or 161° (case 1)

LOW 1762

CREST 1835

or 161°

Geocosmic Correlations of Initial Cycle Troughs to Cycle Crests

From the initial low of 1842 to the crest in 1929, Neptune advanced from 17° Aquarius to 1° Virgo, or 194° (case 2)

LOW 1842

Neptune	17°	Aquarius
---------	-----	----------

CREST 1929

Neptune	1°	Virgo
---------	----	-------

or 194°

Geocosmic Correlations of Initial Cycle Troughs to Cycle Crests

From the initial low of 1932 to the crest in 2007, Neptune advanced from 5° Virgo to 19° Aquarius, or 166° (case 3)

LOW 1932

CREST 2007

or 166°

Geocosmic Correlations of Initial Cycle Troughs to Cycle Crests

Based on these initial findings of Neptune,
when would the next cycle crest occur?

Geocosmic Correlations of Cycle Crests to Initial Cycle Lows

Due to the fact that all three long-term cycles that have been confirmed so far had very steep but rather short declines, this particular study may not be too useful

In all cases, the decline from the long-term cycle crest to its troughs lasted only 2-7 years

Neither Pluto nor Neptune will move very far in such a short amount of time

Neptune only advanced 4-14° in the three cases of long-term cycle crests to troughs
