

**URANUS STUDIES FROM  
“THE ULTIMATE BOOK ON STOCK MARKET TIMING VOLUME 2:  
GEOCOSMIC CORRELATIONS TO INVESTMENT CYCLES”**

*In our Course 2 workbook, we did not include the following study for the above mentioned book that can be relevant to today's stock market. We include it here for your knowledge.*

**INGRESSES OF URANUS**

The fact that the prior two confirmed secondary lows (involving the transit of Uranus) which preceded great bull markets (1857 and 1942) happened when Uranus was about to ingress a new sign brings up an interesting possibility. Perhaps the ingress of Uranus might be a critical market-timing indicator by itself. Theoretically, this would make sense, for the astrological principle of Uranus correlates with the concept of reversals and sudden changes. The principle of any planet ingressing into a new sign correlates with the concept of a shift in collective psychology — a change in collective sentiment, values, goals, and even beliefs. Thus, Uranus ingressing into a new sign has the astrological qualities of what might coincide with changes of trends in financial markets — like stocks.

To test this theory, let's us examine the relationship of Uranus ingress periods to long-term cycles in the U.S. stock market since 1872 (see Table 5). This table shows 21 completed periods of the Uranus ingress (1872-2011). These are evenly divided into long-term crests (12) and troughs (12) that unfolded nearby. The reason there are more than 19 troughs and crests is because in three instances, both types occurred nearby. In all cases, the minimum cycle periodicity used was the 4-year cycle. The last case (May 2011) may not be applicable to the DJIA, but it did correspond to a long-term crest in other world stock indices in May 2011

Perhaps the most outstanding characteristic is the fact that each of these 4-year cycles (tops or bottoms) unfolded when Uranus was in the last 10° or first 10° of a sign (each sign has 30°). *There were no instances of major reversals shown here that unfolded when Uranus was posited in the middle third of any sign. In fact, 19 of these 24 cases (79%) unfolded when Uranus was between 23° of one sign and 5° of the next sign.* If we look just at the 21 dates themselves, 17 occurred in this same sector of each sign (81%).

When an orb of only 3° on either side of the ingress is used, nine of these Uranus ingresses (42.8%) coincided with major trend reversals, which is quite remarkable. Perhaps even more remarkable is that 16 of these cases had an "ingress zone," occur during a *central time band*, where Uranus spent 9-10 months retrograding back and forth. In eight of these cases, a long-term cycle reversed in this zone (asterisks in Table 5).

**URANUS INGRESSES AND LONG-TERM CYCLES**

<b>Uranus Ingress Dates</b>	<b>Actual Cycle Culmination</b>	<b>Uranus Position At Cycle Turn</b>
1. June 29, 1872	Feb. 1874, 18-year Crest	7° Leo
2. Aug. 1878	June 1877, 18-year Trough	21° Leo
3. Oct. 1884-July 1885	June 1884, 9-year Trough	24° Virgo
4. Dec. 1890-Sep. 1891	May 1890, 18-year Crest	23° Libra
5. Dec. 1897-Sep. 1898	Aug. 1896, 18-year Trough	20° Scorpio
6. Dec. 1904	Nov. 1903, 9-year Trough	23° Sagittarius

	Jan. 1906, 18-year Crest	5°	Capricorn
7. Jan. 1912-Nov. 1912	Oct. 1912, 4-year Crest	29°	Capricorn*
8. Apr. 1919-Jan. 1920	Oct. 1919, 9-year Crest	28°	Aquarius*
9. Mar. 1927-Jan. 1928	Sep. 1929, 18-year Crest	10°	Aries
	Nov. 1929, 4-year Trough	7°	Aries
10. June 1934-Mar. 1935	July 1932, 18-year Trough	23°	Aries
11. Aug. 1941-May 1942	Apr. 1942, 9-year Trough	29°	Taurus*
12. Aug. 1948-June 1949	June 1948, 4-year Crest	26°	Gemini
13. Aug. 1955-June 1956	Apr. 1956, 4-year Crest	28°	Cancer*
14. Nov. 1961-Aug. 1962	Nov. 1961, 9-year Crest	0°	Virgo*
15. Sep. 1968-June 1969	Dec. 1968, 4-year Crest	3°	Libra*
16. Nov. 1974-Sep. 1975	Dec. 1974, 18-year Trough	0°	Scorpio*
17. Feb. 1981-Nov. 1981	Apr. 1981, 9-year Crest	29°	Scorpio*
	Aug. 1982, 9-year Trough	0°	Sagittarius
18. Feb. 1988-Dec. 1988	Oct. 1987, 18-year Trough	23°	Sagittarius
19. Apr. 1995-Jan. 1996	Nov. 1994, 4-year Trough	23°	Capricorn
20. Mar. 2003-Dec. 2003	Oct 2002, 4-year Trough	25°	Aquarius
21. May 2010-Mar. 2011	May 2011, 4-year Crest	3°	Aries
22. May 2018-March 2019	Dec 2018, 4-year Trough**	29°	Aries*
23. July 2025–April 2026	Taurus-Gemini		

**Table 5: List of all Uranus ingress periods since 1872, the long-term cycle(s) that unfolded closest to the ingress, and the actual position of Uranus on the date of that long-term cycle. The asterisk (\*) represents cycles which unfolded during the ingress zone, in cases where the retrograde period caused this zone to last 9-10 months.**

**\*\* The low on December 26, 2018 was thought to be the 4-year cycle at the time, but that was taken out in the COVID-19 Pandemic hysteria that lasted one month, Feb-March 2020. The yellow highlighted lines represent updates to these studies presented in Vol 2.**

In terms of months away from the ingress, Table 5 shows that there were 18 cases in which there was a Uranus “ingress zone” (where it went into a new sign, retrograded out, and then returned into that new sign). Of these, nine cases exhibited a reversal during the central time band of the Uranus “ingress zone,” and five instances when it unfolded within 5 months prior to the first ingress. That means that a 4-year cycle either bottomed or topped out within 5 months prior — or during — a Uranus “ingress zone” in 14 of 18 historical instances (77.77%). More recently, since 1912 we see this correlation present in 12 of the past 15 instances (80%). The conclusion is that there is a much higher than expected probability that a 4-year cycle or greater will either top out or bottom between a period that starts 5 months prior to the first pass, through the month of the final pass, of a Uranus ingress into a new sign. As stated in the first printing of this book published in January 1999, *“If the next Uranus ingress zone is March-December, 2003, then this study suggests a four-year cycle will either bottom or top out as Uranus transits between 20° Aquarius and 10° Pisces (April 2000-December 2006), with the greatest probability being between October 2002- December 2003 (5 months before the first ingress commences, until the very last instance of that same ingress — the end of the ingress zone).”* In retrospect, we can see that the DJIA bottomed in October 2002, while most of the other world stock indices bottomed in March-April 2003, right within the time band that these studies suggested a 4-year cycle would be completed.

The next time that Uranus transits 23° of one sign (Taurus) to 5° of the next sign (Gemini) will be 2023-2028. When overlapping the time bands of the long-term cycle lows and secondary low associated with Uranus and Neptune as outlined in this and the previous chapter, the overlap period will be 2025-2028. This also fits with the Moon’s North Node period for a stock market low.
