

SUN-MOON CORRELATIONS FOR U.S. STOCKS QUIZ # 7

1. What is the newest rating system used now for 1-, 2-, and 3-star weighted value scores for the DJIA?

>114= 1-star, >135 = 2-star, >150 = 3-star

2. How many of the Solar-Lunar combinations have a weighted value score of over 160, as given in Volume 4 for the DJIA? List them according to their highest scores.

Sun Aquarius-Moon Capricorn: 192.8, Sun Leo-Moon Aries: 181.3, Sun Sagittarius-Moon Aquarius: 179, Sun Cancer-Moon Taurus: 172.1, Sun Capricorn-Moon Aries: 164.3, Sun Virgo-Moon Gemini: 163.2

3. How many of the Solar-Lunar combinations have a weighted value score of less than 45.0, as given in Volume 4 for the DJIA? List them according to their lowest scores.

Sun Capricorn-Moon Pisces: 18.7, Sun-Leo, Moon-Sagittarius: 33.9, Sun Cancer-Moon Virgo: 34, Sun Aquarius-Moon Aries: 44.9

**SUN-MOON CORRELATIONS FOR SHORT-TERM TRADING
REVERSALS IN SILVER
QUIZ 8**

1. What are the weighted value scores of importance for Silver reversals? 1-star, 2-star, and 3-star ratings?

One-star: >120, Two-star: >140, Three-star: > 160

2. Which Sun-Moon combinations have a weighted value score of over 160 for Silver? List them in order of their highest values first.

Sun-Aquarius, Moon-Aquarius: 204.9, Sun-Sagittarius, Moon-Gemini: 192.2, Sun-Taurus, Moon-Leo: 182.6, Sun-Capricorn, Moon-Pisces: 178.9, Sun-Pisces, Moon-Virgo: 172.9, Sun-Aries, Moon-Sagittarius: 171.9, Sun-Virgo, Moon-Aries: 170.4, Sun-Aries, Moon-Gemini: 168.3

3. What are three criteria for a strong crest signature in Silver, via the solar-lunar studies?

Solar-Lunar combination WV above 120, Solar-Lunar combination for trough below 83.3, Crest WV at least twice that of trough WV.

4. What Sun-Moon combinations fit all three criteria for a trading crest in Silver?

Sun-Libra, Moon-Taurus, Sun-Libra, Moon-Virgo, Sun-Scorpio, Moon-Gemini

5. Are there any Mercury or Venus combinations that would enhance the crests signatures found above?

No

6. What are three criteria for a strong trough signature in Silver, via the solar-lunar studies?

Solar-Lunar combination WV above 120, Solar-Lunar combination for a crest below 83.3, Trough WV at least twice that of crest WV

7. What Sun-Moon combinations fit all three criteria for a trading trough in Silver?

Sun-Cancer/Moon-Taurus, Sun-Libra/Moon-Aries, Sun-Aries, Moon-Aquarius

8. Are there any Mercury or Venus combinations that would enhance the trough signatures found above?

For Sun-Aries/Moon Aquarius: Venus in Aquarius: 132

For Sun-Cancer/Moon Taurus: Venus in Gemini: 131

NO QUIZ LESSON 9

**THE TRADING SET UP FOR OPTIMAL USE OF SOLAR-LUNAR
REVERSAL DAYS IN DJIA AND SILVER
QUIZ 10**

1. True or false: The first step in trading solar-lunar reversal periods is to make a list of all the dates that have a high weighted value score for each month.

TRUE

2. Define an isolated high.

The high is above the high of the day before and the day after.

3. Define an isolated low.

The low is below the low of the day before and the day after.

4. When determining if a solar-lunar combination has a bias towards an isolated high or low, what conditions are best to observe in terms of weighted value scores?

Respective trough or crest WV be above 120 and at least twice the value of the opposite WV. (For crest, should be at least twice the WV for a trough, for trough, should be at least twice the WV for a crest).

5. True or false: an isolated high or low can be important even if it does not coincide with a solar-lunar reversal date.

TRUE

6. When does the set up begin for a crest in a solar-lunar reversal zone? When is it confirmed? Where does one put a stop-loss once it is confirmed?

As soon as the moon enters the new sign and takes out high of previous day. It is confirmed upon the formation of an isolated high, and stop is placed just above isolated high.

7. When does the set up begin for a trough in a solar-lunar reversal zone? When is it confirmed? Where does one put a stop-loss once it is confirmed?

As soon as the moon enters the new sign and takes out low of previous day. It is confirmed upon the formation of an isolated low, and stop is placed just below isolated low.

8. When is it not essential that a solar-lunar reversal happens as part of a 4% filtered wave?

A 2.5% move will be sufficient in many cases. In fact, it is often enough if it is just an isolated low or high, especially if it closely follows a major, half-primary, or primary cycle, and the market is in a trend to that forthcoming cycle trough or crest.

ENHANCED TIMING USING INTRADAY CHARTS QUIZ #11

1. What is the first step to follow in trading a solar-lunar reversal period?

Make sure you are in the time band for a solar-lunar reversal.

2. Once you are in the time frame of a solar-lunar reversal time period, how do you use intraday charts? What are you looking for in order to make a trade?

To narrow down the time band and wait for the market to take out the prior day's high or low.

3. When everything is positioned just right – you are in the time band and price range and the technical set up is overbought or oversold, what is the last step necessary to make that trade?

Go to the one-minute or tick chart, and wait for that stochastic to go to zero if buying or to 100 if selling.

4. Once you are in that trade, where do you place your stop-loss?

Set your stop-loss based on a risk assessment, or on a lower support or higher resistance level that would indicate the trade isn't working.

5. Once you are in the trade and it goes your way, where and when do you take initial profits?

Take an initial profit when the market moves 2.5% from the low or high connected to the entry, or when the 30- or 60-minute chart reaches the opposite extreme of overbought/oversold.
