

ENHANCING INTRADAY TRADING BY USE OF AN ASTRO CLOCK AND ANIMATED DAILY HOROSCOPE MODULE LESSON 12

The purpose of this lesson is to introduce the concept of using an astro clock or animated daily horoscope to identify times when a planet is crossing an angle. Theoretically, these times will coincide with highs and lows in the day, which will aid entry and exit points for day traders.

In this lesson you will learn:

How to determine the time of day when a planet crosses an angle, for intraday market timing of highs and lows; which planets crossing angle are theoretically likely to correspond to an intraday reversal.

USING AN ASTRO CLOCK OR ANIMATED DAILY HOROSCOPE TO DETERMINE POTENTIAL TIMES DURING THE DAY THAT A MARKET WILL TURN

Many Financial Astrologers will also use an astro clock, or animated horoscope for intraday guidance in identifying potential times for reversals.

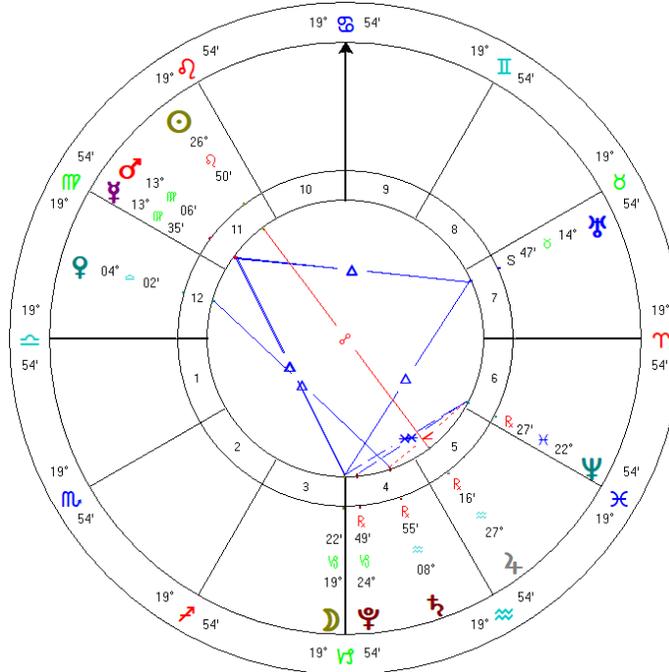

The idea is that certain financial markets will reverse when certain planets cross the horizon (Ascendant-Descendant) and/or meridian (MC or IC) during the day.

For instance, here is a chart of 10:43 AM, August 19, 2021 in New York City. Note that the Moon opposite the Midheaven, or on the IC at this moment. The idea is that within 5 minutes or so, the stock market (DJIA) could reverse. On the intraday 1-minute chart on the next page, you will see that the low of the day occurred at 10:49 AM. This time is boxed in blue.

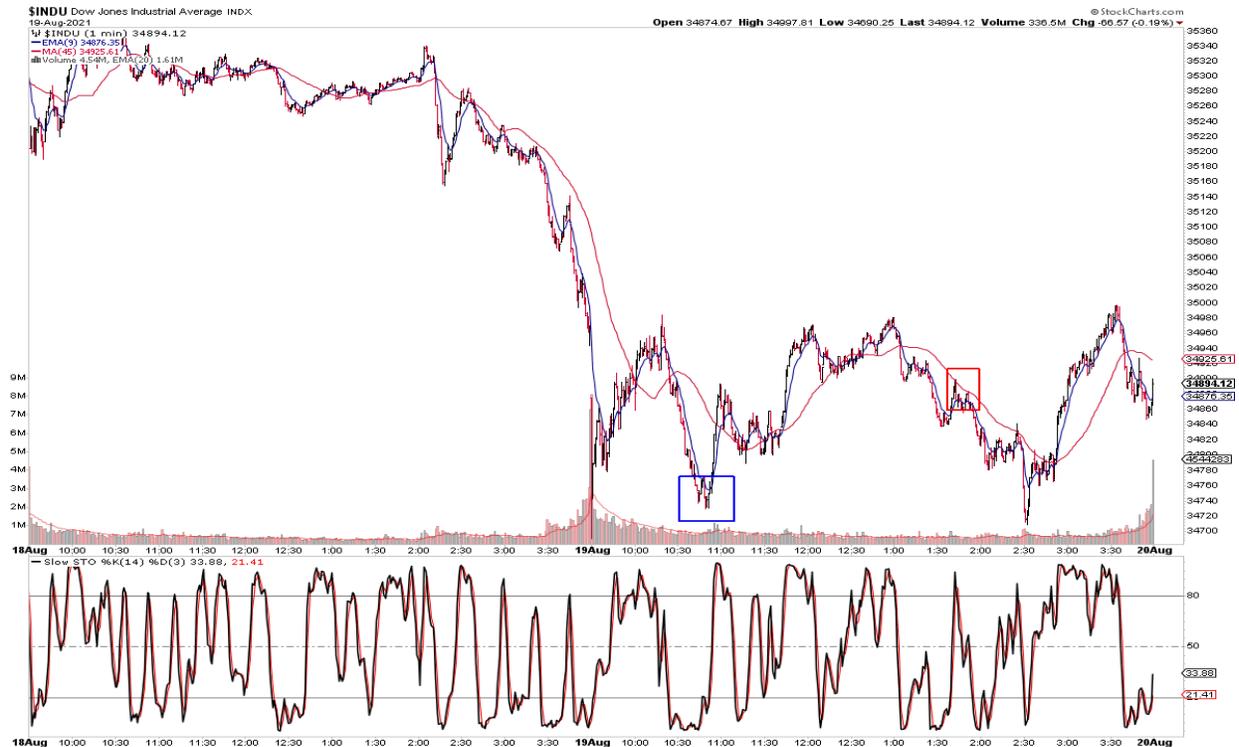

Event of Aug 19 2021

Event Chart

Aug 19 2021, Thu
 10:43:53 am EDT +4:00
 New York, New York

You can make a list of all the times during the day that a planet crosses the angle by using the “animate” feature of Solar Fire, after you bring up the chart of the day. Just choose to fast forward (animate) by the minute, until you see a planet crossing an angle, then note the time and prepare to trade at that time if the market is making an intraday high or low.

You can also use an astro clock, or “Real Time Clock,” that comes with most astrological software programs. Just set it on your screen and watch as a planet moves up to conjunct an angle in real time. Then check the market and see if it is making a high or low on an intraday chart (1-minutes, 5-minutes, etc.). If it is, and if it is also near a price target you consider to be support or resistance, you can initiate or exit an intraday trade.

Use the other intraday indicators provided in the previous lesson to help precise entry and exit points.

CONSIDERATIONS

The purpose of this lesson is only to introduce you to the very shortest-term uses of astro innovators. It is for your knowledge and perhaps enjoyment. You will not be tested on these concepts.

Unless you are day trading or providing multiple intraday updates for clients, these techniques may not be of much use. Personally, we don’t use them, because in a given 24-hour period, all 10 planets will cross all 4 angles a total of 40 times. Since markets are now open 24

hours/day, that's a lot of times to observe. One can become myopic and lose sight of the bigger picture, which most of your clients don't want you to experience.

So, the question that begs answering is: which planets are important to observe when they cross an angle during the day? Which are most likely to correspond to a tradable high or low? Theoretically, you may consider the following as potentially important in making those choices:

1. Any planets within one-degree of an exact aspect will highlight those planets. When either of them crosses an angle, an intraday high or low could form. In the August 19 example, the Sun was in opposition to Jupiter. When they were on the MC-IC, the market reversed within minutes.
2. The planet ruling the Moon is important, especially if it aspects the Moon that day. Watch for those times to coincide with a reversal. On August 19, the Moon was in Capricorn, ruled by Saturn. When the **Saturn crossed the IC, the market reversed.** However, this won't always unfold in such a manner.

This concludes the final lesson in Course 4. It concludes the final lesson in the first year of studies with MMTA. Thank you for being a part of this "virtual" pioneering effort. We look forward to working with you next year!
