

SOLAR-LUNAR CORRELATIONS TO SHORT-TERM REVERSALS IN FINANCIAL MARKETS

EXAM: COURSE 4

1. Approximately how often does a lunar ingress take place?
 - A. Every day
 - B. Every 2-1/2 days
 - C. Every month
 - D. 2-5 times per year

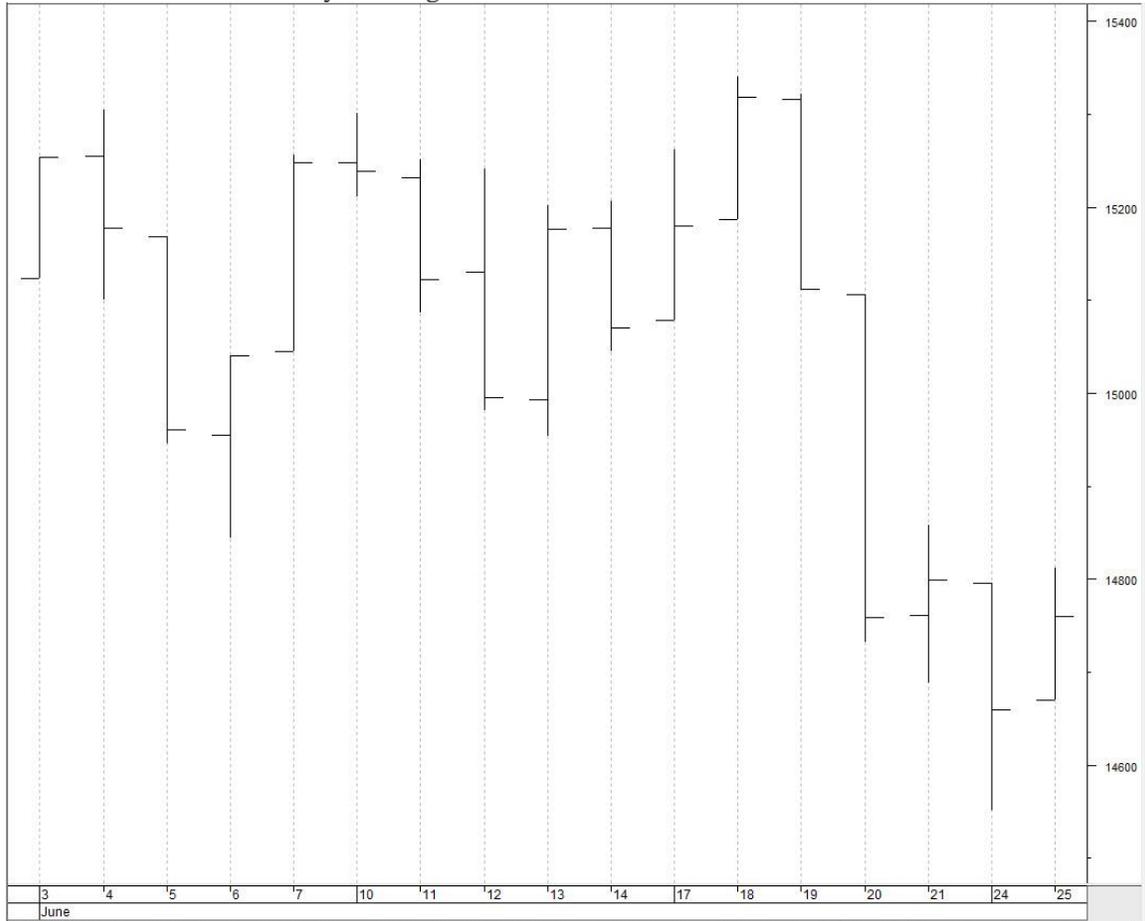

2. How long does it take the Moon to go through the entire 12 signs of the zodiac?
 - A. 27-1/3 days
 - B. About 29 days
 - C. One month
 - D. One year

3. How often does a new moon occur?
 - A. Once every 27-1/3 days
 - B. About every 29 days
 - C. Once a month
 - D. Once a year

4. Which of the following statements are true about an isolated low?
 - A. It is a bar in which the low price is lower than the previous bar and the next bar
 - B. It is a price bar in which the low is only lower than the previous price bar
 - C. It is a price bar in which the low is only lower than the next price bar
 - D. It will always be present on the lowest price in a filtered wave

5. Which of the following statements are true about an isolated high?
- A. It is a bar in which the high price is higher than the previous bar and the next bar
 - B. It is a price bar in which the high is only higher than the previous price bar
 - C. It is a price bar in which the high is only higher than the next price bar
 - D. It will always be present on the highest price in a filtered wave

6. True or false: All cycle troughs are isolated lows.

7. In the above chart, what date(s) correspond to an isolated low?
- A. June 4
 - B. June 6
 - C. June 13
 - D. June 24
8. In the above chart, which date(s) correspond to an isolated high?
- A. June 4
 - B. June 10
 - C. June 14
 - D. June 18

9. What is a filtered wave
- A. A pattern of three moves up and two moves down
 - B. A three-phase pattern in a cycle
 - C. A two-phase pattern in a cycle
 - D. A line connecting the high and low of a price move that is defined by a percentage of gain or loss
10. True or false: In MMTA studies, a filtered wave move is determined as a percentage of the value of the high from which it started or ended.
11. Over a one-week period, a stock starts from a low of 25.00/share and moves up to 26.00/share in 3 days, and then starts down again. What is the percentage move of the filtered wave from 25 to 26, as computed in MMTA studies?
- A. 1%
 - B. 3%
 - C. 3.8%
 - D. 4%
12. Now let us assume that same stock moved back down to 25.00/share over the next week before starting back up again. What is the percentage move of the filtered wave down from 26 to 25, as computed in MMTA studies?
- A. 1%
 - B. 3%
 - C. 3.8%
 - D. 4%
13. What does a “baseline” refer to in a research study involving geocosmic signatures?
- A. A line on baseball field connecting each base to the next base, such as first base to second base
 - B. The lowest price on a chart
 - C. The lowest price on a filtered wave
 - D. The total number of days used in the time frame from which the study was conducted
14. In a large study of geocosmic signatures that goes from January 1, 1900 to January 1, 2000, the percent of time that the Sun and Moon are in each sign during the baseline part of the study will be about....
- A. 5%
 - B. 8%
 - C. 8.33%
 - D. 10%

15. True or false: The baseline percent of reach planet in each sign is the denominator in the calculation of a weighted value score.
16. The “rate of frequency” in a research study of geocosmic signatures refers to...
- A. The number of times the geocosmic criterion in the study was achieved during the time band studied
 - B. The number of times that a market made an isolated high during the study
 - C. The number of times that a market made an isolated low during the study
 - D. The number of times that a market made an isolated low or high during the study
17. How are weighted values determined in the MMTA studies?
- A. By dividing the “frequency of occurrence” of a geocosmic criterion in a specific time band by the number of occurrences in the baseline of that time band
 - B. They are percentages of times that each planet meets the defined criterion for each sign
 - C. By dividing the rate of frequency of each planet in each sign (in percentage terms) by the baseline totals for each planet-sign combination (in percentage terms)
 - D. The strongest aspects get the greatest values, and the weaker aspects get less
18. A weighted value score of 100 for a geocosmic signature means...
- A. The signature is extremely strong
 - B. The signature is extremely weak
 - C. The signature is completely normal – it not strong or weak
 - D. None of the above
19. True or false: the higher the weighted value score, the higher its historical correlation was in meeting the criterion of a reversal or a “Big Range Day.”
20. A weighted value score of 0 for a geocosmic signature means...
- A. The signature is extremely strong
 - B. The signature is extremely weak
 - C. The signature is completely normal – it not strong or weak
 - D. It never met the defined criteria for the time frame of the study
21. In the study of astrology, which celestial body represents feelings and emotions?
- A. Sun
 - B. Moon
 - C. Venus
 - D. Pluto

22. Generally speaking, which moon signs are buoyant and indicate rising stock prices if not mother major planetary aspects are involved?
- A. Fire
 - B. Earth
 - C. Air
 - D. Water
23. Generally speaking, which moon signs are more subdued and introspective and indicate falling stock prices if no other major planetary aspects are involved?
- A. Fire
 - B. Earth
 - C. Air
 - D. Water
24. True or false: Planetary aspects are more dominant than lunar signs and must be taken into account. In fact, they must be given more weight than the signs of the Moon
25. Which if the following statements is generally true according to this course?
- A. Gold and Silver make a low when the Moon is in late Cancer or early Leo, and a high in Virgo
 - B. Gold and Silver make a high when the Moon is in early Aries, and a low in Virgo
 - C. Stocks generally rally from a low in Leo or the first 20 degrees of Virgo into Libra
 - D. All of the above
26. In MMTA courses, what horoscope do we construct each trading day in order to get a sense of how the DJIA might behave?
- A. Noon for New York City
 - B. 9:30 AM for Chicago
 - C. We will use the Buttonwood Chart of the NYSE and observe transits to it each day
 - D. We will use the USA chart observe transits to it each day
27. When we construct this chart, what are we looking for?
- A. The position of the Moon by degree and sign
 - B. Any major planetary aspects within 1 degree
 - C. The ruler of the Moon's sign
 - D. All of the above
28. In solar-lunar weighted values, what level (score) is considered "worth noting" for a short-term trading reversal when less than 50 years are used?
- A. 100
 - B. 120
 - C. 150
 - D. 200

29. In a study where the baseline involves over 10,000 days (like the DJIA studies used in Volume 4), what weighted value score is now considered “worth noting?”
- A. 100
 - B. 114
 - C. 120
 - D. 140
30. What considerations should be taken into account in determining if a solar-lunar combination has a bias towards a crest rather than a trough?
- A. The weighted value score for “Crest” should be over 120
 - B. The weighted value score for “Crest” and “All” should be over 120
 - C. The weighted value score for “Crest” should be over 120 and for trough under 83.3
 - D. It is best if the weighted value score for “Crest” is over 120 and at least twice the WV score for a trough
31. In determining what percent of a filtered wave to use for a market when doing a solar-lunar reversals’ study, what is a primary consideration that we use for short-term trading?
- A. 3%
 - B. 4%
 - C. 5%
 - D. Whatever percent will give a result where the number of instances that fit the criterion is close to 1/15 of the number of days used in the baseline study
32. To find a solar-lunar reversal signature for a given market using a specific filtered wave percentage, what is the first step to take?
- A. Look at the Moon sign distribution for all the dates that fit the criterion
 - B. Look at the percentages of Moon sign distribution for all the dates that fit the criterion
 - C. Segregate the instances of Sun signs that fit the criterion and then find the percentages of Moon sign distribution for all the dates that fit the criterion
 - D. All of the above
33. In cases where over 10,000 dates are used for a filtered wave study, what is the lowest weighted value level could now be considered extremely important in solar-lunar results?
- A. 120
 - B. 140
 - C. 150
 - D. 200
34. What weighted value level and below is considered an extremely weak correlation to short-term market reversals in solar-lunar studies?
- A. < 100
 - B. < 82.3
 - C. < 66.7
 - D. < 50.0

35. What other planetary combinations and their weighted values can be useful to these studies on short-term trading reversals?
- A. Mercury
 - B. Venus
 - C. Sun-Mercury
 - D. Sun-Venus
36. When Venus appears two signs before the Sun, it is...
- A. A bright morning star
 - B. A bright evening star
 - C. It is too far away to see
 - D. The most rare condition of Venus and the Sun
37. When Venus appears two signs after the Sun, it is...
- A. A bright morning star
 - B. A bright evening star
 - C. It is too far away to see
 - D. The most rare condition of Venus and the Sun
38. When the Sun is in Libra and Venus is in Sagittarius...
- A. Venus is a bright morning star
 - B. Venus is a bright evening star
 - C. The DJIA has historically had more than normal or expected amount of 4% price reversals
 - D. Silver has historically had less than the normal or expected amount of 4% price reversals
39. True or false: Solar-lunar or any geocosmic studies will be most accurate when using a cash chart that has sufficient volume and a trading range for every day.
40. Which of the following Sun-Moon combinations have the highest weighted values for the DJIA according to Volume 4 studies? List them in order of their highest scores
- | | | |
|-----------------------------------|---|-----|
| A. Sun Cancer, Moon Taurus | 4 | 172 |
| B. Sun Leo, Moon Aries | 2 | 181 |
| C. Sun Virgo, Moon Gemini | 6 | 163 |
| D. Sun Sagittarius, Moon Aquarius | 3 | 179 |
| E. Sun Capricorn, Moon Aries | 5 | 164 |
| F. Sun Aquarius, Moon Capricorn | 1 | |

41. When the Sun was in Aries, which was Venus in when Silver had the highest rate of frequency for 4% or greater reversals?
- A. It was conjunct the Sun (same sign)
 - B. It was a bright evening star
 - C. It was a bright morning star
 - D. None of the above
42. What sign was Venus in then?
- A. Aquarius
 - B. Pisces
 - C. Aries
 - D. Gemini
43. Which Moon sign has the highest correlation to short-term trading troughs in the Silver market when the Sun is in Aries, according to the studies in The Sun, Moon, and Silver Market?
- A. Gemini
 - B. Sagittarius
 - C. Capricorn
 - D. Aquarius
44. When the Sun is in Aries, what would you be looking for in the Silver market when the Moon and Venus are in Aquarius?
- A. "Big Range Days"
 - B. An isolated low from which Silver reverses up rather sharply
 - C. A lower than normal probability of a reversal
 - D. Low volatility
45. What weighted value score for solar-lunar combinations in Silver will now be considered three-star types (highest probability of a reversal), as opposed to what was published in 2006?
- A. > 150
 - B. > 160
 - C. > 175
 - D. > 200
46. What weighted value for Silver is now considered a 1-star (worth considering)?
- A. > 112
 - B. > 114
 - C. > 116
 - D. 120 or greater

47. True or false: In “The Sun, Moon and Silver Market” book studies, there was no cases (zero) of an isolated low when the Sun was in Aries and the Moon was in Pisces that was part of a 4% or greater filtered wave.
48. True or false: Solar-lunar combinations of a low probability reversal can be negated if there is a geocosmic critical reversal date also in effect.
49. An example of a solar-lunar combination correlating primarily with a crest when the Sun is in Libra would be when the Moon is in....
- Aries
 - Taurus
 - Gemini
 - Virgo
50. What is the formula for finding a “Big Range Day” of 3% or more?
- $(\text{High} - \text{Low}) > (\text{High} \times .03)$
 - $(\text{High} - \text{Low}) > (\text{Low} \times .03)$
 - $(\text{High} - \text{Low}) > (\text{Close} \times .03)$
 - None of the above
51. Which of the following Moon signs had a high correlation to “Big Range Days” in Silver when the Sun was in Scorpio
- Aries
 - Gemini
 - Sagittarius
 - Pisces
52. Once you enter a solar-lunar time band for a short-term reversal (i.e. high weighted value score), what is the first thing that has to happen to indicate it might be valid?
- The price must take out the prior day’s high
 - The price must take out the prior day’s low
 - The price must take out the prior day’s high and low
 - The price must take out the prior day’s high or low
53. Once a market enters a solar-lunar reversal zone (i.e. high weighted value score) and takes out the high of the previous day, what are the ideal factors you consider before you sell short?
- Double tops on the intraday charts (60-, 30-, 5-minute charts)
 - A stochastic reading of over 90% on the 30- and 60-minute charts
 - A case of bearish oscillator divergence on the 60- and/or 30-minute chart
 - All of the above

54. Once you enter a solar-lunar time band for a short-term reversal (i.e. high weighted value score) and the market takes out the low of the previous day, what are you looking to do as a trader?
- A. You are looking to sell short
 - B. You are looking to buy
 - C. Either A or B
 - D. Neither A or B
55. If you are looking to buy on a solar-lunar reversal date with high weighted value with a bias towards a low, and prices start to fall below the prior day's low, and both the 60- and 30-minutes charts shows a stochastic reading below 95%, what is your next step before buying?
- A. Go back and check to see if the current price is making a double bottom on the 30- or 60-minute chart
 - B. Observe if the current low is exhibiting a case of bullish oscillator divergence on the 30- or 60-minute chart
 - C. See if the 5-minute stochastic is near 0% or has been recently and is higher now with prices lower
 - D. All of the above
56. Where do you ideally want to see the 1-minute stochastic when you buy on a solar-lunar reversal day after the low of the previous day has been taken out and the 5-, 30- and 60-minute chart and technical setups are in place?
- A. 0%
 - B. 1%
 - C. Below 5%
 - D. Below 10%
57. If a market enters a solar-lunar reversal zone (i.e. high weighted value score) and takes out the high of the previous day, it is only confirmed as a valid reversal if....
- A. It continues higher the next day
 - B. It closes lower the next day
 - C. The high of the next day is lower than the high of the current day
 - D. None of the above
58. Once you confirm a valid solar-lunar reversal from a high, where should you place your stop-loss to start with?
- A. 2-1/2% above the high of the move
 - B. 4% above the high of the move
 - C. Just above the isolated high of the solar-lunar reversal date
 - D. Just above your entry point

59. True or False: It is best when a solar-lunar reversal day is headed in the direction of a low or high that correlates with the natural lunar rhythm cycle for that market

60. On the 30-minute chart above on the DJIA between August 20-30, the low occurs early on August 28. Why would you buy there?
- It was a solar-lunar reversal day for DJIA with a very high weighted value score
 - The 30-minute stochastics were very oversold (under 5%) but exhibiting bullish oscillator divergence
 - It was a “Big Range Day”
 - All of the above
61. As a short-term trader, what do you do if the market exhibits an inside day on a solar-lunar reversal period (high weighted value day)?
- Nothing
 - You wait for the 5-minute stochastics to go below 5% and then look to buy
 - You wait for the 5-minute stochastics to go above 95% and then look to sell
 - None of the above
62. Once a solar-lunar reversal period is confirmed and you are in the trade, when do you take initial profits?
- Once the market moves at least 2.5% from the isolated high or low that was in the reversal zone
 - Once the 30- or 60-minute stochastic chart reached the opposite extreme from the entry point levels and starts exhibiting patterns of a reversal setting up
 - When your broker tells you to
 - When your personal chart says you are about to lose a profit and take a loss

63. True or False: You should only buy a solar-lunar reversal day when the low of that day is lower than the day before and it is at least 4% off the high that started the current filtered wave.
