

MMA DAILY RECOMMENDATIONS FOR  
MONDAY, MARCH 28, 2022  
© MMA, INC, 2022

**Geocosmic Critical Reversal Dates (CRD):** These dates affect all markets. They are the midpoint of geocosmic clusters and have a range of three days either side. Sometimes they expand to as much as 5 days. The idea is to see a new two-week or greater high or low and then a reversal. It is especially effective when major, half-primary, or primary cycle troughs are due. These are more important than the solar-lunar reversal dates. The more stars next to the date, the greater the historical correlation with a cycle end and reversal. For more information, please read Volume 3 of the Stock Market Timing series. Below is the date of the midpoint, and in parentheses, the length of time containing the geocosmic signatures (known as a "cluster"). If the cluster is long (more than 15 days), there may be other possible reversals, based on tighter geocosmic clusters, within the greater cluster.

**Mar 18-21\*\*\* (We are here. Secondary low in stocks, low in Crude Oil, T-Notes, Euro)**  
**April 1\* (Venus and Mars conjunct Saturn)**  
**April 12\*\* (May stretch from April 4-15)**  
**May 6-9\*\*\***

**These periods are usually more important than the solar-lunar reversal zones, but not necessarily any more accurate. It is just that when they do hit, they usually correspond with primary cycles, whereas lunar reversals need only correspond to 2.5% reversals.**

**ABBREVIATIONS:**

**CRD = Geocosmic Critical Reversal Date**

**ATH = All-Time High**

**MA = Moving Average**

**BTCH (Mar Bitcoin): ETF is BITO.** Friday's close was a bearish trigger. And it closed above the TIP for the 9<sup>th</sup> consecutive day, which means it remains in a trend run up.

The daily TIP is now 43,444. It will be downgraded back to neutral if it closes below there today.

Daily support is 43,696-43,731.

Daily resistance is 45,241-45,276.

Bullish crossover zones remain in effect at 42,845-42,967, 36,697-38,620, 32,745-36,400, 27,747-28,088, 24,000-26,463, 21,526-21,572, 19,836-19,783, 18,460-19,095, 14,535-14,590, 12,140-12,233, 11,240-11,420, 9685-10,445, 7850-8183, 5546-5673, 4166-4293, 3920-3940, 3602-3735, 3357-3413 and

3215-3327. It closed below others previously at 44,846-45,703, 52,830-53,160 and 62,360-64,420, so these are now resistance.

Bearish crossover zones remain in effect at 49,472-49,562 and 49,840-50,666. It closed above others previously 9537-9588, 9003-9005, 8170-9070, 7112-7115, 3957-3960 and 3852-3950, so these are support now.

The market continued to rally this weekend with a jolt up above 46,500 on Sunday, March 27, in the spot market. This still fits our ideas that previously stated,, *“We will still look for a high Friday-Sunday, +/- 1 day which starts now.... Whatever the high is by Sunday, we will look for a 10-12% pullback from there, and maybe more.”*

**LUNAR REVERSAL SIGNALS (FOR CASH):** These values match noon GMT instead of noon NYC, since GMT is the change of date associated with Bitcoin. The following table shows two sets of the weighted values. The left-hand set is of 12% or greater reversals based lunar days from our studies, now going back to July 17, 2010. The right-hand set includes is of 10% of greater reversals values of Moon signs only since Uranus has been in Taurus. These numbers represent potential for reversal, where anything above 120 has a high probability of an isolated top or bottom to trade opposite of, for a 12% reversal. We may have to adjust this first column down to 115 now that we have added another 4 years of data. \* represents a strong reversal possibility. The more \* the stronger it is (however, right hand column can only hold one \* for now). # represents a low likelihood for a reversal. The more #, the less likely a reversal or big range day. The best set up is when both sets of numbers for each sign agree with a reversal, low, or high. Keep in mind that these are purely lunar days, not solar/lunar days, as with metals and stocks. Please note that our studies based on noon GMT, and not Eastern time, since Bitcoin’s day is based in GMT, not Eastern Time, and noon is the middle of the trading day. But since the high or low of the day may happen before or after noon, and the Moon can move up to 7 degrees in half of a day, we have to allow a one-day orb for these dates to manifest a correct setup.

The lunar cycles for Bitcoin for the next few days are as follows:

**Total cases since July 17, 2010**

**Total cases with Uranus in Taurus**

	<u>Reversal 12%</u>	<u>Lows</u>	<u>Highs</u>	<u>Reversals 10%</u>	<u>Lows</u>	<u>Highs</u>

**Position traders** are long with a stop-loss on a close below 28,000 after covering 1/3 so far.

**Aggressive traders** are long with a stop-loss on a close below 28,000. As stated Friday, *“Cover 1/3 at 46,000 +/- 600.”* That could be filled Sunday when futures open.

**VAT: Very Aggressive Traders, trading mostly by the moon cycle** are flat and may stand aside today.

**ETHH (Mar Ethereum):** *Written by MMA Analyst Gianni Di Poce:* Friday's close was a bearish trigger but maintains the bullish sequence. And it closed above the TIP for the 9<sup>th</sup> consecutive day, which means it remains in a trend run up.

The daily TIP is now 3067. It will be downgraded back to neutral if it closes below there today.

Daily support is 3093.50-3094.

Daily resistance is 3188-3188.50.

A bullish crossover zone just formed at 3030-3039. Bullish crossover zones are in effect at 2424.50-2705.50, 2075-2230.60, 1667.50-1751.30, 1581.50-1689.50. These are all support.

Bearish crossover zones are in effect at 3744-3753.30, 3943.80-4104, 4359-4432.80, 4566.80-4585.30, 4767.50-4767.80, 4763.30-4916.80. These are all resistance. Prices closed above a bearish crossover zone at 3052-3080 on Thursday and others at 2806-2911 and 2584-2588 recently, so these are now support.

Last week's gains held over the weekend, which is a promising sign. Let's see how it handles the Venus-Saturn conjunction. If it clears 3300-3400, we could see a powerful rally follow. As stated for Friday, *"It cleared a couple crossover zones, which suggests that this primary cycle could still have further upside. The Venus square Uranus aspect from March 19 led to a break of resistance, which now becomes support. Still want to see an overbought reading (above 70) on the RSI indicator to confirm bulls have recaptured momentum."* Still the case.

**Position traders** are flat and may stand aside.

**Aggressive traders** were flat and advised, *"... go long at current price levels with a stop loss on a close below 3030."* Got it. Cover 1/3 at 3400 +/- 12 if offered.

**August 25, 2022: 1:00 PM, Denver, CO, ISAR Conference, 4-Hour Pre-Conference Workshop by Raymond Merriman on "ASTROLOGY AND THE ART OF FINANCIAL MARKET TIMING: HOW TO FORECAST TRENDS AND MARKET REVERSALS."** Financial markets offer objective means to test astrological validity. The Moon changes signs every 2-3 days and is valuable for short-term trading. Planetary stations and aspects identify longer-term market reversals. Approximately 4-5 times/year, markets will form important highs or lows, which are the most favorable times to buy and sell for position traders. This course provides research studies showing the correlation of astrological factors to short-term and longer-term financial markets. The focus will be upon stock markets, precious metals (Gold and Silver), and Bitcoin, and how to integrate astrology with cycle studies to attain optimal market timing skills. as guidelines - and use intraday analysis to establish positions in directions of comments given, so long as those support/resistance (entrance) areas) look favorable according to intraday analysis as well. Support and resistance are areas for day traders to look to buy and sell intraday. No guarantees are made for accuracy. Futures trading involves risk of large loss as well as large gains, and reader is solely responsible for any actions taken in markets, and neither the author nor publisher assume any responsibility whatsoever for reader's decisions. Futures or options trading are considered high risk.

Information is provided herein with sincere intent, and according to our own studies and methodologies. These reports are provided mainly for "speculators." By its very nature, "speculation" means "willing to take risk of loss." Speculators" must be willing to accept the fact that they are going to have losing trades, many more than say "investors." That is why they are "speculators." The way "speculators" become profitable is not so much by high percentage of winning trades, but by controlling amount of loss on any given trade, so the average trade on winners is considerably more than the average trade on losing trades. MMA's comments can be of value to both speculators and investors. MMA's trade recommendations will be of potential value only to speculators.

Support may represent favorable risk/reward places to buy if the trend is up. If prices trade below support, then have a close back above, it is considered a bullish "trigger," and oftentimes represents a good buy signal. Resistance may represent favorable risk/reward places to go short if the trend is down. If prices trade above it, then have a weekly close back below, it is considered a bearish "trigger, and oftentimes a good sell signal.
