

**MMA DAILY RECOMMENDATIONS FOR
TUESDAY, NOVEMBER 22, 2022
© MMA, INC, 2022**

U.S. markets will be closed Thursday in observance of the Thanksgiving holiday.

Geocosmic Critical Reversal Dates (CRD): These dates affect all markets. They are the midpoint of geocosmic clusters and have a range of three days either side. Sometimes they expand to as much as 5 days. The idea is to see a new two-week or greater high or low and then a reversal. It is especially effective when major, half-primary, or primary cycle troughs are due. These are more important than the solar-lunar reversal dates. The more stars next to the date, the greater the historical correlation with a cycle end and reversal. For more information, please read Volume 3 of the Stock Market Timing series. Below is the date of the midpoint, and in parentheses, the length of time containing the geocosmic signatures (known as a “cluster”). If the cluster is long (more than 15 days), there may be other possible reversals, based on tighter geocosmic clusters, within the greater cluster.

Nov 8 (Could extend to Nov 13**)
Nov 21-22** (Crude Oil Nov 10-23)
December 6****

These periods are usually more important than the solar/lunar reversal zones, and usually more accurate because they have a wider orb of time (+/- 3 trading days vs. +/- 1 trading day for solar/lunars). They will correspond more often with major, half-primary, or full primary cycles, whereas lunar reversals need only correspond to 2.5% reversals.

ABBREVIATIONS:

**CRD = Geocosmic Critical Reversal Date
ATH = All-Time High
MA = Moving Average**

Review: Stocks were down Monday. So were currencies, metals, and Bitcoin, but T-Notes and Crude Oil only finished modestly lower.

DJIA Cash: Monday’s close was another bullish trigger. And the close was above the daily trend indicator point (TIP) for the 2nd day, which means it remains neutral.

Today’s trend indicator point (TIP) is 33,626. It will be upgraded to a trend run up if it closes higher today.

Daily support is 33,547-33,551. A trade below, followed by a close back above this range, is a bullish trigger.

Daily resistance is 33,853-33,857. A close above is bullish. A trade above here, followed by a close back below is a bearish trigger.

Bullish crossover zones remain in effect at 32,807-33,435, 30,612-30,626, 29,045-29,094, **28,440-28,881**, 27,057-27,229, 26,712-26,749, 24,533-24,798, 24,405-24,479, 23,825-24,273, 23,237-23,340, 21,344-22,135 and 19,045-20,160. DJIA closed below others recently at 34,581-34,617, 35,091-35,123 and 35,641-35,663 so these are also resistance.

Bearish crossover zones remains in effect at 33,845-33,899 (that held the high), 34,288-34,513 and 35,591-35,663. It closed above two others on yesterday's monster rally at 32,807-32,899 and 33,353-33,588. It closed above others previously at 31,599-32,209, 29,568-29,747, 28,855-28,876, **28,481-28,503**, 28,093-28,192, 26,822-27,378, 26,476-26,485, 25,733-26,833, 21,294-21,686 and 26,044-26,136, so these are support zones.

Not much action Monday, but it did close with a bullish trigger and a close above resistance will be another bullish sequence. But until it takes out last week's high, we also have a case of a lower secondary high and that is more of a bearish sign. Seasonal and geocosmics are still bullish, so we will go with that.

Solar Lunar periods coming up (the more*, the more likely a reversal, the more #, the less likely a reversal). If it states, "often a high" or "often a low," it means that a high or low has occurred about twice as often as a high or a low in the past. However, if the value has an asterisk next to it, it should be looked upon more as reversal, whether historically it has been more often a high or low. Sometimes the reversal can be one day off due to overnight and pre-market trading in futures. *The values in parentheses represent new research studies conducted by Yating Hu, MMTA student, from 2020-2021.*

But we are still in heliocentric Mercury in Sagittarius, so we can’t rule out a further rally first before that low comes in.” If it is to still rally further with helio Mercury in Sagittarius, it has to start now.

The following solar/lunar days are from our studies published in The Gold Book: Solar-Lunar Reversal Keys for Trading Gold. (These are the lunar cycles for the next two weeks, per these initial studies). These numbers represent potential for reversal, where anything above 114 has a high probability of an isolated top or bottom to trade opposite of, for a 3% or 4% reversal. Use if either are highlighted. * Represents a strong reversal possibility. The more * the stronger it is. # Represents a low likelihood for a reversal. The more #, the less likely a reversal or big range day.

The solar-lunar cycles for Gold for the next few days are as given below. If it states, “often a high” or “often a low,” it means that a high or low has occurred about twice as often as a high or a low in the past. However, if the value has an asterisk next to it, it should be looked upon more as reversal, whether historically it has been more often a high or low.

It closed above others previously at 9537-9588, 9003-9005, 8170-9070, 7112-7115, 3957-3960 and 3852-3950, so these are support now.

Interesting that spot BTC fell to a new low but futures did not. If it can rally, that will become a case of intermarket bullish divergence. And lunar signs indicate that it could rally. As stated yesterday, *“We are entering a period of a lunar cycle for a high November 19-29 following the double bottom low of November 14.”* Previously we stated, *“The double bottom of Monday and last week is still holding. ... I am impressed that it made a double bottom (Monday) in our lunar sign for a low, then closed with a bullish bias. That could be the low, or at least we know where support is now (14,025-15,250 short-term).”* It has to hold here or else... bearish per the weekly comments.

UPDATED LUNAR REVERSAL SIGNALS (FOR CASH) AS OF OCT 8: These values match noon GMT instead of noon NYC, since GMT is the change of date associated with Bitcoin. The following table shows two sets of the weighted values. The left-hand set is of 12% or greater reversals based lunar days from our studies, now going back to July 17, 2010. The right-hand set includes is of 10% of greater reversals values of Moon signs only since Uranus has been in Taurus. These numbers represent potential for reversal, where anything above 120 has a high probability of an isolated top or bottom to trade opposite of, for a 12% reversal. We may have to adjust this first column down to 115 now that we have added another 4 years of data. * represents a strong reversal possibility. The more * the stronger it is (however, right hand column can only hold one * for now). # represents a low likelihood for a reversal. The more #, the less likely a reversal or big range day. The best set up is when both sets of numbers for each sign agree with a reversal, low, or high. Keep in mind that these are purely lunar days, not solar/lunar days, as with metals and stocks. Please note that our studies based on noon GMT, and not Eastern time, since Bitcoin’s Day is based in GMT, not Eastern Time, and noon is the middle of the trading day. But since the high or low of the day may happen before or after noon, and the Moon can move up to 7 degrees in half of a day, we have to allow a one-day orb for these dates to manifest a correct setup.

The lunar cycles for Bitcoin for the next few days are as follows:

Total cases since July 17, 2010

Position traders were flat and advised to, "... buy at 15,500 +/- 600 with a stop-loss on a close below 14,500." Got it as the low was right there.

Aggressive traders were flat and advised to, "... buy at 15,500 +/- 600 with a stop-loss on a close below 14,500." Got it.

VAT: Very Aggressive Traders, trading mostly by the moon cycle are long with a stop-loss on a close below 14,900. Let's exit on a rally up to 18,500 +/- 600.

ETHX (Nov Ethereum): *Written by MMA Analyst Gianni Di Poce.* Monday's close was bearish and follows a bearish trigger, which creates a double-bearish sequence as one was already in effect. And it closed below the TIP for the 10th time in 11 days, which means it remains in a trend run down.

The daily TIP is now 1164. It will be upgraded back to neutral if it closes above there today. We could expect that today or tomorrow.

Daily support is 1061-1064.

Daily resistance is **1134-1137.50**.

Prices closed below bullish crossover zones at **1117-1264**, 1362.50-1395, 1321-1322, 1362.50-1395, 1321-1322, 1569-1569.50, 2075-2230.50, 2424.50-2705.50, 2836-2857.50 and **3187-3341**, so these are now resistance.

A bearish crossover zone just formed at 1134-1183. Bearish crossover zones remain in effect at 1800-1838, 2434-2623, **3161.50-3195.50**, 3368.50-3404.50, 3744-3753.30, 3943.80-4104, 4359-4432.80, 4566.80-4585.30, 4767.50-4767.80, 4763.30-4916.80. These are all resistance. It closed above one at 1083-1110.50 (it closed here), so these are now support.

Ethereum's decline is pretty extended right now. Yesterday stated, "*If Ethereum can avoid a close below the June lows, it would be a strong signal. Lot of Jupiter energy this week so could see big price moves.*" It's late in the 4-year and primary cycles, and due for a low at any time. The question is whether we see one more washout lower. Lots of bearish sentiment in crypto land right now, which suggests the worst could be behind it.

Position traders are flat and may stand aside.

Aggressive traders are short with a stop on a close above 1183 now after covering 1/3 for a nice profit. Cover another 1/3 at 975 +/- 6 if offered. Revert back long if stops trigger with a stop on a close below 1308.

VAT: are long with a stop-loss on a close below 1030. Traders were advised, "*Cover 1/3 at 1215 +/- 6 if offered.*" This was elected the previous day, so we are out of 1/3.

Information is provided herein with sincere intent, and according to our own studies and methodologies. These reports are provided mainly for "speculators." By its very nature, "speculation" means "willing to take risk of loss." Speculators" must be willing to accept the fact that they are going to have losing trades, many more than say "investors." That is why they are "speculators." The way "speculators" become profitable is not so much by high percentage of winning trades, but by controlling amount of loss on any given trade, so the average trade on winners is considerably more than the average trade on losing trades. MMA's comments can be of value to both speculators and investors. MMA's trade recommendations will be of potential value only to speculators.

Support may represent favorable risk/reward places to buy if the trend is up. If prices trade below support, then have a close back above, it is considered a bullish “trigger,” and oftentimes represents a good buy signal. Resistance may represent favorable risk/reward places to go short if the trend is down. If prices trade above it, then have a weekly close back below, it is considered a bearish “trigger, and oftentimes a good sell signal.
