

## **MMA Investment Retreat: *Geocosmic Correlations to Long-Term Investment Cycles***

**June 1-4, 2023**

In-Person at the Michigan State University Management Education Center in Troy, Michigan & Virtual via Zoom

**MMA President, Raymond Merriman: *Welcome and Introduction to the Retreat***- The five-step process to determining optimal times for buying and selling, and why long-term investing in financial markets (especially the stock market) is the key to building long-term wealth – and how cycles and geocosmic studies can be of greatest value in that quest.

**MMTA Program Director, Gianni Di Poce: *Glossary of Geocosmic Terms***- Review of the geocosmic terms to be used throughout Course Two and weekend retreat.

**Gianni Di Poce: *Ingresses of Pluto, Neptune, Uranus, Saturn, and the Moon's North Node***- The purpose of this lesson is to identify the ingresses of the Saturn, Uranus, Neptune, Pluto and the Moon's North Node – to determine when they enter and exit each sign of the zodiac and how long they remain in each sign.

**Gianni Di Poce: *Periodicities of Outer Planet Orbits and Their Principles Pertaining to Financial Markets***- The purpose of this lesson is to understand the orbital periods of Saturn, Uranus, Neptune, Pluto and the Moon's North Node. It is also to provide a sense of the principles associated with each planet and the Moon's North Node, particularly as it might apply to financial markets.

**Raymond Merriman and MMTA Graduate, Kat Powell: *Pluto Sign Correlations to Long-Term Cycles in Financial Markets***- This lesson examines the movement of Pluto through the signs of the zodiac and its correlation with long-term cycles in financial markets, with special emphasis upon the U.S. and British stock markets. The topics to be discussed in this lesson include.

**Raymond Merriman: *Outer Planetary and Lunar Node Positions at Long-Term Market Cycle Troughs and Crests***- The objective of this lesson is to note the degree and sign positions of Pluto, Neptune, Uranus, Saturn, and the Moon's North Node at long-term market cycle troughs and crests.

**Gianni Di Poce: *Neptune, Uranus, and Saturn Sign Correlations to Long-Term Cycles in Stock Markets***- These lessons examine the movements of Neptune, Uranus, and Saturn through the signs of the zodiac and their correlation with long-term cycles in stock markets, with special emphasis upon the U.S. and British stock markets.

### **Saturday June 3, 2023**

**Raymond Merriman: *The Moon's North Node Sign Correlations to Long-Term Cycles in Stock Markets***- This lesson examines the movement of the Moon's North Node through the signs of the zodiac and its correlation with long-term cycles in stock markets, with special emphasis upon the U.S. and British stock markets.

**Gianni Di Poce: *Waxing and Waning 2-Phase Planetary Pair Cycles***- The objective of this lesson is to understand and apply the two-basic phases of planetary pair cycles - waxing and waning – to determine if they correlate to long-term trend patterns of financial markets. We will pay special attention to interest rate markets related to Saturn and Pluto.

**Gianni Di Poce: *Designing a Study to Measure the Correlation of Long-Term Planetary Aspects to Market Cycles***- The objective of this lesson is to design a study that will measure the correlation (if any) between major aspects involving Saturn, Uranus, Neptune, and Pluto to long-term cycle troughs and crests in financial markets.

**Raymond Merriman: *Dates of 4-Year and Greater Cycles in U.S. and British Stock Markets***- The purpose of this lesson is to have the list of dates when the U.S. and British Stock Markets completed their 4-year cycle troughs and crests. It is also to see those times that even greater cycles unfolded, such as the 18-, 36-, and 72-year cycles.

**Gianni Di Poce: *The Jupiter and Saturn Effect***- The objective of this class is to see the roles of Jupiter and Saturn as they correlate to long-term market cycles. It is also to see that their greater correlation is to intermediate-term cycles – the “phases” of the 4-year cycle.

**Raymond Merriman and Gianni Di Poce: *Global Markets Recap***- Taking a look at current market opportunities.

**Kat Powell: *Putting it Altogether: Overlapping Time Bands for Long-Term Market Cycles with Long-Term Geocosmic Cycles***- The purpose of this lesson is to integrate the time bands when long-term market cycles are due, with the time bands of planetary aspects indicating a reversal in a long-term market trend. In this manner, we identify overlap periods – narrower periods - when the potential for a long-term market crest or trough is most likely to occur. Once we enter those time bands, we then apply chart patterns and technical studies to help us narrow that time band for a cycle top or bottom down even further.

## **Sunday June 4, 2023**

**Raymond Merriman: *Planetary Correlations to Long-Term Cycles and Trends in Gold***- The objective of this lesson is to focus on the history of the gold market and discover geocosmic correlations to its long-term cycles.

**Raymond Merriman: *Planetary Correlations to Long-Term Cycles and Trends in Silver***- The objective of this lesson is to focus on the history of the silver market and discover geocosmic correlations to its long-term cycles.

**Gianni Di Poce: *Planetary Correlations to Long-Term Cycles and Trends in Currencies and Crude Oil***- The objective of this lesson is to focus on the history of the currency market and crude oil and discover geocosmic correlations to its long-term cycles.

**MMTA Graduate Rita Perea: *The Role of Psychology in Financial Market Trading: Maximizing the Key Mindset Traits of Successful Traders and Investors***- Psychology plays a crucial role in successful trading and investing. Traders and investors who learn to pinpoint thought patterns, manage emotions,

understand motivations, and make better-informed trading decisions can gain a significant advantage, and profit from, their market activities. This presentation will explore what might be getting in the way of your trading success and what you can do about it.

**Gianni Di Poce and Raymond Merriman: *Planetary Correlations to Intermediate-Term Cycles and Trends in Crypto Currencies***- The objective of this lesson is to focus on the history of the crypto market and discover geocosmic correlations to its long-term cycles.
